

## PUI Assignment 6 – Prototyping a Web Portfolio

---

### Web Portfolio

Building a personal portfolio website showcasing my projects and professional achievements. This would be interactive via the use of animations and the ability to like the project.

This would include my projects, blog, experience/resume, and conference/talk/workshop links. I'll be adding links to my GitHub, Behance, LinkedIn profiles as well.

I'd want this site to be structured such that I'm able to dynamically update content without me having to manually update code each time! This should help save time in the long run.

I will be using NodeJS combined with a front-end framework such as ReactJS or AngularJS to provide the optimum experience across different platforms and browsers. Also adding Google Analytics for site traffic knowledge.
